

**Drover Energy's team can provide unique operational and/or consultation input regarding capillary installation in the Geothermal market.**

**Single & Dual Capillary Installations for Specific Chemicals at Different Depths.**

**Downhole Corrosion Coupons.**

**Sensors & Tec Line Deployment for Pressure and Temperature Monitoring.**

**Knowledge and Equipment for High Pressure Installations.**

**Remote Chemical Tank Monitoring. Monitor Pressures, Inventories & Change Injection Rates via Computer**

**Specialty Applications Utilizing Capillary for cleanouts in pipelines and well bore.**

**Custom Capillary Packages Available For Your Next Global Project ---->**

**EXPERIENCED INTERNATIONAL DEPLOYMENT CREWS**

**~ EQUIPMENT ~ TUBING ~ CHEMICALS ~**

**~INSTALLATIONS ~ TRAINING**

## **Geothermal Market Applications**

### **ALLOY SELECTION**

Due to the inherently high wellbore temperatures and corrosive nature of geothermal wells, Drover provides corrosion resistant grades of stainless steels and nickel alloys. Proven success in severe environments. Tubing sizes available from 1/4" OD to 1-1/4" OD.

### **SCALE & CORROSION INHIBITION**

Precise placement of continuous chemical treatment from your well bore to the surface. A proven solution protecting your well from the severe scaling and corrosion problems common in Geothermal wells.

### **PRESSURE AND TEMPERATURE MONITORING**

The ability for capillary systems to be installed in extreme temperatures provides a viable option for monitoring real time pressures and temperatures in your well bore. Many Geothermal companies rely on installations to continuously monitor formation pressures and temperatures.

**Our team is an original, fresh-thinking group that understands the importance of listening to your needs and engineering a solution in an expedient and cost effective manner!**

**Ö.Ö on the back of this brochure and select one of the options to contact us with your unique application today!!**

**DROVER ENERGY SERVICES** is a team of dedicated personnel with over 100 years combined experience and expertise in the capillary and coil tubing industry.

This depth of varying knowledge provides you with a valuable resource to address your needs concerning capillary injection systems for the geothermal market.

In 16 years our experienced personnel have been responsible for installing over 8000 chemical injection systems throughout the world in over 34 different countries. Providing our customers with a proven method of installations during "live well" and extreme conditions.

Precise placement of downhole chemicals dealing with issues such as corrosion and scale. A significant challenge in the geothermal markets.

**DROVER ENERGY SERVICES** has invested heavily in high quality, small footprint/ versatile equipment. Whether it be loaded onto a vessel or trailer, the capillary skids incorporate ISO lock down corners, made compliant with international road regulations. A direct focus toward operational convenience and safety.
